

Larger logs are slabbed with a chainsaw-mill to be made into three-inch thick slabs for tables or bar tops.

Other large logs are cut into six-inch thick fireplace mantels.

Smaller logs less than 20 inches diameter are cut into lumber of various thickness for....

Wood-turning billets, tool handles, pepper grinders, candle sticks and table legs of 2,3- & 4-inch square pieces of various lengths.

Sawed into Lumber: 10 and 12 feet long from 1, 2 & 3 inches thick for woodworking projects.

Boards for small DIY projects such as cutting boards, shelving, cheese boards, and many other small projects. Cut and planned into 2,3-,4-, & 6-foot lengths.

Small board lengths for segmenting and intarsia projects.

Additionally, we spend a lot of time gathering Pecan, Maple, Cedar Elm, Hackberry, Cherry and Red oak **logs for Spalding**. That's the introduction of a fungus into the wood to add to the natural beauty of the various woods when cut.

We also gather pine to be cut into utility projects for the sawmill such as stickers, billets, and forklift pallets. We also cut pine into one and a half inch thick boards by 20 foot lengths for the horse people to build stalls and corrals from. This thick lumber prevents a horse from kicking through their enclosures.

New Projects we started this year:

Tall billets for vases and funeral urns of 6,8,10 & 12 inch square times 14" tall. Available in various woods including Black Walnut.

Tree cookies of 1,2,3 & 5" thickness. These cookies range from 10" to 36" diameter.

Wood products in thirty-two different species that include:

- A very large selection of Black Walnut.
- Mesquite
- Pecan
- Maple
- Red Oak
- Post Oak
- Red Cedar
- Popular
- Cherry
- White Ash
- Board d' Arc
- Sycamore
- Cedar Elm
- Pine.

Lumber can be custom cut to length and planned to fill a customer's needs.

All lumber is air dried and then the thicker slabs are sent on to a wood drying kiln to be farther dried to 6-8 % moisture.
